◆ The *PANEL PAL* is a product that allows you to carry up to 15- 2" diameter portable livestock panels on your pickup. It works with most bale beds, and you can still use your bumper hitch.

A product developed to make your jobs a little easier...

## How it works...

- ◆ An adjustable fork in the middle allows you to carry panels off to one side somewhat and yet keeps them from sliding back and forth when the panels' upright is put in it.

- ◆ Retaining latches can remain open while loading or unloading panels. Then when ready to transport, the latches are put into the closed position, keeping the panels secure.

- ◆ Utilizing your bed arms you can hover the Panel Pal inches above the ground making loading and unloading much easier, especially with one person.

- ◆ Retractable legs can keep the panels far enough off the bed to see under with the mirrors and go over most gate posts.

- ◆ At the end of the day, it doubles as a freestanding storage rack for them, can be hooked up without leaving the cab, and has no extra tires to maintain.
